▼ Technical Skills

- **Programming Languages:** C, C#, Java, JavaScript, Python, TypeScript, SQL, Ocaml
- **Frontend & Web:** HTML, CSS, Angular.js, NodeJS
- **Big Data & Data Engineering:** Apache Spark, Apache Hadoop, Apache Hive, Apache Kafka, Neo4j
- **Machine Learning & AI:** PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas
- **Framework & Tools:** Spring, LaTeX, Matplotlib

▼ Education

2022/2023 - present

Master's degree in Data Engineering – Roma Tre University

Here some of relevant projects completed during my studies about *Information Visualization, Deep Learning, Data Engineering and Big Data*, developed in teams and in collaboration with leading institutions. Working with Prof. Patrizio Angelini of John Cabot University of Rome, I co-designed '**ECHOgraph**' a **tool that reveals biased relationships and character viewpoints** in novels, screenplays, and films, introducing new visualization metaphors, with also building a dedicated dataset based on the '*Lost*' series for testing. I also developed a **ML project about classification of variable stars** from astronomical observation data ([dataset reference](#)) and created an **LLM/NLP pipeline** to automatically extract and analyze claims and tables from scientific papers.

Currently co-working and completing two ongoing projects: **(1)** image segmentation of advertising banners in football match footage leveraging DINOv3; and **(2)** designing a model lake-inspired management tool called '**Model HERITAGE**' to capture, retrieve, and govern model lineage (based on fine-tuning). I also have completed all courses and am currently in search for selecting my thesis topic to finalize my MSC.

2019/2020 - 2022/2023

Bachelor's degree in Computer Engineering – Roma Tre University

- BSc Thesis – "*Management and Control Console for Fuel Depots and Filling Stations: G-Stations*"
Conducted in collaboration with **Archeometra Srl**. Designed and developed a **web-based management and control console** tailored for system administrators and depot managers, enabling supply request handling, operational management, and real-time monitoring of fuel depots and refueling stations. The solution was aimed at **streamlining internal workflows** and **enhancing operational efficiency** within large-scale companies in the energy sector.
- "**Roma Tre University Merit-Based Award for Academic Achievement (2021/2022)**", during 2022/2023 academic year

2014/2015 - 2019/2020

High School leaving qualification in scientific studies – Evangelista Torricelli High School, Rome

- "*Cultural Integration with English Language Programs*" – exchange experience at "St. Mary's Academy" in Carlow, Ireland
- "*Media art festival 2018 HACKATHON*" – **Victory in the team competition** "Art Spatial HACKATHON" at MAXXI National Museum in Rome. [Link event on youtube](#)

▼ Work experiences

Internship at Archeometra srl for the BSc thesis (*6 months in 2023*)

Math, Physics and English language tutoring (*2019 – present*)

Organizer and animator at "Summer and Sports center S.M.D.G", Rome (*2016 – 2019*)

Ball Kid (selected via try-outs), Internazionali BNL d'Italia (ATP Masters 1000), Rome (*2015–2018*)

▼ Languages

Italian: mother tongue - English: intermediate-advanced level - Spanish: scholastic level

▼ Softskills

Teamwork, public speaking, problem solving, motivation and goal orientation, attention to detail

▼ Personal information

Date of birth: 05/01/2001 - Rome

Address: 78 via F.M. Torrigio 00168, Rome - Italy

Driving license: AM - B
